

Teaming

step-01: create a virtual interface. virtual interface creating command-

```
nmcli connection add con-name team0 type team ifname team0 config '{ "runner" : { "name" :  
"activebackup" } }
```

```
nmcli connection add con-name port1 type team-slave ifname eno1 master team0
```

```
ifup eno1
```

```
nmcli connection add con-name port2 type team-slave ifname eno2 master team0
```

```
ifup eno2
```

```
nmcli connection modify team0 ipv4.addresses '192.168.1.2/24 192.168.1.1' ipv4.method manual  
connection.autoconnect yes
```

```
nmcli connection up team0
```

```
nmcli connection up port1
```

```
nmcli connection up port2
```

Check -192.168.1.2

চেক করার পদ্ধতি

```
Teamdctl team0 state
```

Interface down করার জন্য

```
Ifdown port1
```

Delete করার জন্য-

```
Nmcli connection delete team0
```
